American Dyestuffs in 1919

THIS COMPANY was founded to provide America with a permanent dye-stuff industry. Its predecessors were the pioneers in American color production. The war brought not only the opportunity but the necessity for the development of this accumulated experience. Upon this experience has been built a structure in personnel and in equipment not bettered by any European works.

The obligation resting upon us during the war was to produce quantity. The emergency needs of the Government and of the textile industry demanded first attention. The building of our immense plants had to go on hand in hand. Today we are producing some 60 intermediate products and over 160 different colors. Type for type these products are as fine in quality as any ever imported.

Primarily and logically, the American coal-tar color industry is a servant of the great American textile manufacturers, whose annual product runs into the hundreds of millions. It is the needs of the great army of textile consumers that we serve. It is the voice of the textile manufacturer to whom we listen. It is because the great American investment in textile manufacture must be insured against loss for all time, that an American dye-stuff industry has been born to serve the Government with explosives of war, and with colors for textiles and allied industries in both peace and war.

FOR A QUARTER OF A CENTURY.

"THIS BELT HAS RUN A QUARTER of a CENTURY"
says the Belt Man

It's on a countershaft drive and has seen all sorts of hard service for more than twenty-five years, and it's still good for more. Who made it? Why it's a Phoenix Belt, made by the New York Leather Belting people—and a tougher, more durable belt never hugged a pulley. Its been carrying a full load, too—and it isn't burnt or cracked anywhere. A little worn, to be sure, but still good for service.

That sort of service is not unusual from Phoenix belts bearing the N. Y. L. B. trademark. The reason is simple—absolutely first quality center stock cut from finest steer hides—made into belting by men who have been building good leather belting all their lives.

Look for the trademark of the New York Leather Belting Company on every roll of belting that you buy. It is your guarantee of dependable service—and economical operation.

Farnsworth Machines Prove Value to Big Textile Mills

Large Plants Install the Farnsworth Systems—secure the Service and Satisfaction which comes under the **FARNSWORTH GUARANTEE.**

The Empire Oil Works, Oil City, Pa., shown in the cut installed the Farnsworth System and closed down one of five 200 h.p. boilers—proof of our guaranteed *coal saving*—a saving of 20% of their coal pile.

Oil City, Pa., has Joined the Ranks of the Farnsworth Boosters. The progressive Empire Oil Co. owners were among the hundreds of satisfied Farnsworth machine bosters who saw the saving to be effected by installing the machines recommended by our engineers and as soon as our machines started they were able to **SHUT DOWN THEIR BIG BOILER.** "Farnsworth Equipped" means that you are securing all the heat units possible from your coal pile, that you are **not wasting** but **SAVING TONS OF COAL.** A reproduction of one of the machines speeding "over the top" and turning the trick at the Empire works is shown below.

This machine, similar to the coal-savers at the Empire works, drains L. P. Condensation until tank is full, then it rocks on bearing and automatically opens small valve, which admits boiler pressure steam that forces the water into boiler, or if used as pump in distant building, will pump the water to any point of use.

The cut below shows two of the smallest of 12 machines in one plant, draining paper machines, heating systems, fan coil heaters, steam apparatus, etc., and pumping it all under a pressure at a high temperature. The machines in use are the Combination Condensation Pump or Separator with Condenser Vacuum Attachment.

The Farnsworth Systems are saving steam plant owners, paper mills, textile mills, oil refineries, laundries, etc., hundreds of dollars a day in coal and in many instances pay for themselves in a remarkably short time. Our Farnsworth Duplex Boiler Feeder is

*The greatest Coal Saver
ever offered the Steam Plant*

and it will undoubtedly pay you to investigate at once the coal-saving change from the "OLD" to the "NEW" way of handling condensation—from the old method of vacuum pumps, etc., to the Farnsworth system. Our engineers are at your service to answer any boiler feeding or condensation problems. Write for our literature, etc.

Monarch Bobbin Cleaner

A Machine to
Clean Roving
Bobbins from
Spinning
Frames

A Practical
Machine for Both
Large and
Small Mills

Advantages Claimed:

- 1 Saving of Spinner's Time.
- 2 Saving of Bobbins.
- 3 Less waste created and less fibre destroyed.
- 4 Increase in productions.
- 5 Elimination of accidents that occur by use of the knife.
- 6 Spinner is relieved of an unpleasant, disagreeable and unproductive job.

The Monarch Bobbin Cleaner will be displayed at the Southern Textile Exposition, spaces 347 and 348 Main Auditorium Floor. We invite your inspection

Manufactured by

Monarch Bobbin Cleaner Company
Union, S. C.

See Drives Like These at Our Greenville Exhibit

TEXTILE mills need positive drives. Slipping belts with their jerky pickup often means broken threads resulting in the production of an unwarranted amount of "seconds."

Link-Belt Silent Chain Drives are "flexible as a belt, positive as a gear, more efficient than either." They transmit power without slip or loss and on actual test prove themselves 98.2% efficient.

See these drives at the Southern Textile Exposition at Greenville, S. C., May 5th to 10th. You'll find them at space 203, 204 and 205. If you can't come to the exposition, write for our Textile Book No. 258.

SOUTHERN TEXTILE BULLETIN

PUBLISHED EVERY THURSDAY BY CLARK PUBLISHING COMPANY, 39-41 S. CHURCH ST., CHARLOTTE, N. C. SUBSCRIPTION \$1.50 PER YEAR IN ADVANCE. ENTERED AS SECOND CLASS MAIL MATTER MARCH 2 1911, AT POSTOFFICE, CHARLOTTE, N. C., UNDER ACT OF CONGRESS, MAR. 3, 1879

VOLUME XVII.

CHARLOTTE, N. C., THURSDAY, MAY 1, 1919

NUMBER 9

Advance Notice of Textile Exhibits

Link Belt Company.

The Link Belt Company have been allotted spaces 203, 204 and 205 and will show a typical silent chain installation in connection with a standard spinning frame and will also have another moving display, a form of apparatus which shows clearly the operation of silent chain on properly cut sprockets. They will also display samples of silent chain.

Those in attendance during the week of the exposition will be Mr. J. S. Cothran of Charlotte, N. C., Southern representative; Mr. G. H. Burkholder, Mr. C. B. Morish and C. R. Weiss, engineer drive chain department of Philadelphia manufacturing works.

Douglas Company.

Mr. Ira L. Griffin, manager of Southern textile office of Douglas Company, which is located at Greenville, S. C., assisted by Southern sales representatives, Messrs. J. Frank Crawford and Guy L. Morrison, will be in charge of exhibit at the Third Southern Textile Exposition.

The exhibit will consist of samples of the various products manufactured both for textile uses as well as other purposes. An extensive display has been prepared of warps and cloths sized with Douglas Textile Starches. There will also be shown other products in the manufacture of which Douglas Starches have been used.

The Douglas representatives will be very glad to furnish information with reference to the use of corn starches for sizing purposes, thereby making the exhibit of benefit as well as of interest.

Southern States Supply Company.

This company will exhibit the Isko Electric Refrigerating plant; and have this refrigeration unit in connection with special ice water cooling tank for supplying cold drinking water to cotton mills and other manufacturing plants. This equipment is especially designed for furnishing refrigerated drinking water; and for cotton mills it can be done without the use of a circulating pump.

American Kron Scale Company.

The American Kron Scale Company will have an exhibit which will feature their cotton bale portable scale.

This scale has been constructed with a view of giving the user a weighing device that is almost in-

destructible. You can pull this scale over the most uneven floors like any ordinary hand truck without injuring the scale mechanism or destroying the accuracy of the scale.

The mechanism is entirely free from springs, of a self-balancing type, based on the principle of self-sealing; that is, the scale must always indicate the correct weight as long as there is no friction or obstruction in the platform or in any of the vital parts. When a load is placed on the platform, whether carelessly or gently, it is transmitted to the mechanism directly by a non-leakable levers through the draft rod, but the shock itself is absorbed by a non-leakable frictionless dash pot. This dash pot can be adjusted to suit the conditions under which the scale is working by the layman. You can use any kind of liquid in this dash pot, from water to heavy oil.

The platform is constructed entirely of steel with interchangeable bearings throughout. This is one of the most important features in scale construction. If an accident occurs, you can remove any or all of the bearings and replace them in less than half an hour, or in a very short time, in the field without

returning the levers or platform to the factory, which is common with other automatic scales.

J. Kirk Powell Company, of Louisville, Ky., is Southern representative for this scale.

Graceland Greenhouses.

The Graceland Greenhouses of Greenville will exhibit at the Southern Textile Exposition will consist of cut flowers, potted plants and such other exhibits as usual to a greenhouse; also cut flowers and plants to be used in other booths of other exhibitors during the exposition.

Perry-Mann Electric Company.

It will be of interest to the readers of The Southern Textile Bulletin to learn more of an electrical jobbing house located in our midst.

The Perry-Mann Electric Company of Columbia, S. C., are wholesale dealers in electrical supplies and appliances. They represent all of the largest manufacturers in their line and carry the largest assorted stock of wiring materials in the Carolina.

This company began business in 1899 as wiring contractors, continuing until 1917, at which time realizing the need of a jobbing house in South Carolina, they discontinued their contracting department.

Since this they have devoted their whole time and energy to serving central stations, cotton mills, electrical contractors and industrial plants in a manner that demonstrated their ability to serve the electrical industry.

Monroe Calculating Machine Company.

The Monroe Calculating Machine Company's exhibit this year will be in charge of Mr. C. E. Dechant, who is their district manager for the states of North and South Carolina. He will have as his assistant, during the exposition, Mr. F. E. Gray, who is the local manager for the state of South Carolina, with headquarters at 301 Temple Building, Greenville, S. C.

A demonstration of the Monroe machine is an education, as there is no figure work known to pencil and pad that this little "figure wizard" cannot handle with surprising speed and absolute accuracy. Whether your problem is one in addition, subtraction, multiplication, division, or their several combination, the result can be reached through an easy mechanical process with no mental effort.

This year's show gives promise of bringing home a great many lessons to the mills, and the necessity for them to improve their operating conditions. During the period of high prices, any machinery that could be operated at all could be operated profitably. In view of the changed labor conditions, manifestly shorter hours, etc., there is going to be a demand for labor-saving machinery which has never been so pronounced before.

You will receive a warm welcome at the Monroe booths. You are invited to bring along a sample of your figure-work and see how easily the Monroe can reduce it to a simple process, whether that figure-work is discounts, interest, pay-rolls or cost statistics where the requirement is for six or even more decimal places in the result.

Hunter Manufacturing & Commission Company.

This progressive firm is rapidly developing and expanding their trade in foreign fields to such an extent that they have today earned the title, "World Wide Distributors of Cotton Fabrics." Practically all of their fifty-two cotton mills are located in the South.

(Continued on Page 20.)

Textile Exposition Opens Monday

Over two hundred textile manufacturing concerns of America have closed contracts for the exhibition of cotton mill machinery at the Third Textile Exposition which will be held in Greenville next week. Eight hundred manufacturers and representatives have made reservation to visit Greenville during the exposition. In connection with the exposition, the Southern Textile Association, of 2,500 members, will hold its annual convention here May 9th and 10th, and the first annual session of the Southern Social Welfare Congress will be held the same dates. Frank A. Vanderlip, president of the National City Bank, of New York, and Governor Robert A. Cooper, of South Carolina, are among the prominent speakers included in the program.

Saturday, May 10, has been designated Sailors' and Soldiers' Day and a welcome celebration will be held in honor of the returned service men. An impressive feature will be the annual observance of Confederate memorial services in which the soldiers of the recent war and surviving veterans of the War Between the Sections will march side by side in a street parade. The War Department, it was announced, will be requested through South Carolina congressmen to detail two army aeroplanes to Greenville for exhibition flights that day. The aviators will be asked to drop flowers on the Confederate graves.

The official program of the exposition will include numerous features of an instructive nature and the object of variety will be reached in various entertainments that will be offered by the Girls Patriotic League of Greenville, the Young Women's Christian Association, the industrial schools and colleges of the South and professional performers.

The 118th infantry band of the Thirtieth Division, which originally came from Williamston, S. C., with musicians from throughout the South included in its personnel, will arrive in Greenville for the opening of the show following its tour of the States in the interest of the Victory Loan. Concerts will be rendered daily by this military band.

The exposition, it is announced, will open at 10 a. m. and close at 11 o'clock at night. A summer garden, artistically decorated, will be provided for conventions, assemblies and dancing at night. A ball and buffet luncheon are among the social features included in the program of the Southern Textile Association. A dinner will be served one evening of the show in honor of the textile and cotton manufacturers.

The luxurious Country Club will be thrown open to the visitors and devotees of golf, tennis and other outdoor sports will find this resort an ideal place for relaxation and recreation. A golf tournament for the entertainment of the visitors will be in progress that week. Among the exhibitors and others who have made reservations to visit Greenville during the exposition are some of the most experienced golf players

of large Eastern clubs and it is known that many of them expect to compete for honors on the Sans Souci links.

The Textile Club, the Rotary Club, the Chamber of Commerce, the City Council and other organizations of Greenville have placed their shoulders behind the wheel and are pushing the exposition over the road to success. A dynamo of energy behind the enterprise in the Southern Textile Association, which in reality, is the father of the movement that swept the first Southern Textile Show into instant success and paved the way for the erection in Greenville of the magnificent hall as a permanent home of the exposition.

The Southern Textile Exposition company's building, located on West

Washington street, in a stone's throw of railway sidings, was completed at a cost of nearly \$250,000, which is probably the biggest achievement ever undertaken by any city of the size of Greenville in the South. It is a model plant for the holding of these textile shows and similar expositions.

The dimensions of the building are 101 feet wide by 234 feet long and contains a floor area, including the balconies and mezzanine floors, of about 60,000 square feet.

The actual area reserved for exhibits amounts to over 28,000 square feet, exclusive of aisles, stage, offices, toilets, cloak rooms, stair towers, etc.

The building is immediately adjacent to the terminals of the Piedmont and Northern lines, and ex-

hibits are handled from the railroad directly into the building without rehandling.

Telephone and telegraph connections will be installed into the building for the convenience of the exhibitors.

The floor plans for the first and second floors of the building have been greatly improved by running three main alleys through the building, connected by cross alleys, which makes practically every exhibit booth an outside booth. The only criticism against the last show was the dead ends, and these have been entirely eliminated by the new arrangement. While some few exhibit spaces are lost through this arrangement, the management believes that the improvement is worth more than the sacrifice.

The Southern Textile Hall is not only a credit to Greenville, but to the entire South as a magnificent structure in the name of the Southern Textile Exposition, Inc. This building, covering half a city block in the heart of "The Textile Center of the South," was constructed at a cost of \$250,000, primarily as a permanent home of a biennial exposition of cotton mill machinery, and at the outbreak of the European war was one of three such institutions in the world. Boston and Paris had claim to the other two. The latter was shelved for the duration of the well-known emergency, and such undoubtedly would have been the fate of the American twin-shows but for the unexpected early cessation of hostilities.

When America became embroiled, the war clouds dampened the hopes of the local directors and it was decided to act in accordance with the sentiment of the American Manufacturers Association to temporarily abandon the exposition. But with peace dictating reconstruction and the clothing of millions, it is plain that the American manufacturers are entering upon a period in which their factories will be seriously taxed to fill the vacuum that exists abroad.

Transition from war to peace time basis will necessitate changes in the machinery of many Southern cotton mills, and the Southern Textile Exposition management realized that it would be decidedly advantageous to bring the textile and cotton manufacturers together, to combine their interests at this opportune time in one of the biggest textile expositions ever held in America. The revival of the Southern Textile Exposition at this particular period practically assures its success, according to the opinions of leading cotton manufacturers of the South, who were taken into confidence before it was definitely decided by the corporation to stage the exhibition at this time. Manufacturers of textile machinery were likewise sounded out, and it was the consensus of opinion that the Southern magnates would most assuredly make no mistake in proceeding with plans to hold it May 5-10, 1919. They offered their co-operation to make the exposition of surpassing im-

(207) Booth of Southern Textile Bulletin

portance and contracted for large exhibit spaces. Although the building has the largest capacity of any single hall in the South, the management has not encountered any difficulty in disposing of the floor space. Some of the manufacturers filed their applications immediately after the close of the second exposition two years ago, having been gratified over the benefits in actual sales that accrued as a direct result of their respective displays.

It was agreed to stage the Southern Exposition in May because that month is the brightest, most favorable and withal the garden month of the year in this salubrious clime.

The reputation of the Southern Textile Exposition is known from the Atlantic to the Pacific, from the Lakes to the Gulf, and no sooner had bare announcements filtered through the press than the local management was literally snowed under with applications. Representatives have been constantly in touch with either Mr. McPherson or Mr. Burnett.

Southern Textile Association Program.

Thursday.

11:00 o'clock Thursday a. m., address of welcome on the part of the city by Mayor Harvley.

Address of welcome on behalf of the manufacturers by Mr. Allen J. Graham, president of Mills Mfg. Co., Greenville, S. C.

Reply to address of welcome by W. M. Sherard, vice president, Glenn-Lowry Mfg. Co., Whitmire, S. C.

President's Address by A. M. Dixon, assistant treasurer, Trenton Cotton Mills, Gastonia, N. C.

Organization of round table work, consisting of the appointment of chairman and committee on carding, another on spinning, another on weaving, and all other departments of cotton manufacturing, for the purpose of presenting technical papers at the association meetings. This plan was outlined at the Wrightsville Beach meeting, June, 1917, by F. Gordon Cobb, under the title of "A Plan for Better Technical Papers at the S. T. A. meetings."

Informal ball at Cleveland Hall, 9:30 p. m.

Friday.

Reports from the chairman of the committee for the different departments.

Short talk by Professor Doggett of Clemson College.

Two technical papers covering subjects of vital interest to the mills.

Election of officers.

Buffet luncheon served immediately after adjournment in the Textile Hall.

Members desiring to play golf can do so at Sans Souci Country Club, which will be open to S. T. A. visitors during the week. See special announcement.

What She Was.

She came up to the bank cashier's desk and tendered a check for \$100. "What denomination, please?" asked the clerk.

"Methodist," she replied. "What are you."

Our Constitution the Antidote for Bolshevism.

"It is just as ridiculous to abandon that constitution in the science of government," said Harry F. Atwood, in discussing "Our Constitution, the Antidote for Bolshevism," at the convention of the National Association of Cotton Manufacturers at the Hotel Biltmore, "as it would be to abandon the ten digits, in the realm of mathematics; and it is because of that fact that I am willing to impose upon you at this late hour.

"During all the thousands of years prior to the writing of that constitution and the founding of this republic, the pendulum of government throughout the world was swinging back and forth from one extreme to the other, from the extreme of autocracy, which results in tyranny, to the extreme of democracy which has always resulted in chaos. That pendulum was swinging throughout the world, as it has recently in Russia and now in Germany. The men who founded this government said that they were more fearful of democracy than they were of autocracy; they made very clear distinctions between a republic and a democracy, and they called what they founded a republic. We never used the word democracy in referring to our government during the first hundred years. It is an innovation, and since we began it the world has been growing chaotic.

"In no sphere of activity do we find the dangers of the two extremes more disastrous, and on the other hand the value of the golden mean more beneficial than in the realm of government. Too little participation by the people means autocracy, which results in tyranny. On the other hand, too much participation by the people means democracy, which results in democracy. It is the golden mean, the republic—the standard form of government, strictly and literally adhered to—which gives just the right amount of participation by the people in governmental affairs and causes the political plant to thrive and reach its best development and its full fruition.

"And yet every state in the union, instead of using it as a model, is trying to see how far they can vary from it; and there is not a man at the peace table who would know our Constitution if he saw it coming down the street.

"Those are the four elements of a republic. A republic is a form of government under a written constitution that provides for an executive and a legislative body, enumerate their qualifications and defines their powers, provides for a judiciary and for individual rights. When you take away one or more of those four elements you drift into autocracy, and when you add one or more to those four elements you drift into democracy.

"And I want to tell you that if that point was made clear you would have Bolshevism buried in no time. Because Bolshevism is only extreme democracy. We said, 'Make the world safe for democracy,' and Russia was the first of our victims. Russia is a perfect democracy right

now. When a man is extremely gluttonous we say he is hoggish, and what hoggishness is to gluttony, Bolshevism is to democracy.

"We followed that constitution pretty closely for a hundred years, but what about the latter part of the nineteenth century one of the demagogues said you can make a dollar out of 50 cents, and many followed that notion. Since then the demagogues of all parties have been trying to outdo him and we have suggested such things as the initiative and referendum and recall, recall of judicial decisions, boards and commissions, excessive legislation and constitutional amendments, until we see no end.

"I want to give you a few specific points as to how those departures from the constitution are working out. I have been a lone voice crying in the wilderness, and I said nineteen years ago that we would wind up where we are today. There is no cure for the condition today other than that constitution, any more than there would be for a bank balance that you had been guessing at, than to apply the ten digits. It was the only thing that ever worked, and it gave us a leading place among the nations of the world, without a great army or navy. But about twenty years ago foreigners began coming here and telling us about the old schemes that ruined Greece and Rome, and demagogues began advocating them as new progressive ideas. From 1901 to 1910, in every state, we more than doubled the expenses of government. In Wisconsin, which was designated as a model government—that state which produced the patriotic senator, who was a leader in the progressive movement out there during those 'en years—they nearly multiplied the taxes by three, and had they kept it up for two decades, it would confiscate the property of the state. And yet we were sending college students from Yale and Pennsylvania to Madison, Wisconsin, in order that they might behold a model government, with a tendency that in twenty years would wreck the property of the state.

"And you could not go into a meeting of reformers without hearing some one talk of the wonderful government of the state of Oregon! with the initiative, referendum, recall, boards and commissions plastered all over the state until you can hardly move around. But if you ask a man on the train now where he is from, and he says Oregon, and you ask about his government, he will talk about the weather. He is ashamed of it.

"In Oklahoma they produced a senator who said that if a judge of the Supreme Court should happen to declare any piece of legislation unconstitutional, his term of office as judge should automatically expire. And they wrote into their state constitution, some hundreds of pages of fine print, a proposition that innkeepers must furnish to guests sheets not less than seven and a half feet long. In Illinois, where I came from, we had one hundred and twenty-eight boards and commissions, but we struck them out of existence by one piece of legislation last year, and never missed any of them any more than

we would any other nuisance that might be gotten rid of.

"All commissions that have been appointed since the constitution was adopted were departures and dangerous experiments, and their existence has resulted in the expenditure and waste of billions of dollars, lessened the efficiency of public service and confused governmental procedure.

"I tell you business men, you want to strip the federal government and the state government of every board and commission. We had few the first hundred years, and it is quite time we returned to those simpler forms.

"Now I want to tell you that the men who founded our republic were not thinking of popular government or popular fallacies. They were thinking of representative government. They knew human nature, and provided for the practice of government in the same way that you practice medicine or architecture. And during the first hundred years there never was a question submitted to the American people for decision, and there never should be.

"Since we have started these popular fallacies we have ceased producing big men. I could call eleven men out of the Senate and thirty out of the House, and the rest haven't even the intelligence to know their constitutional rights; or the courage to maintain them.

"We want to return to the point from which we started and ascertain where we now are. And the mental attitude of the American people, and especially our so-called leaders—I call them demagogues, most of them, of all parties.

"I want to tell you we had better pull some feathers out of the wings of our imagination and stick them into the tail of our reason, and show respect for the greatest human document ever made by the hand of man. And because a great many people are not familiar with these facts, I want to drive this statement into your minds:

"That there was no government in the seven thousand years of history, prior to the writing of that Constitution, to which the historian can point and truthfully say: 'There was a government that worked well.'

"That the men who founded this government were more fearful of democracy than of autocracy, and they founded a republic, which was a mean between the two.

"The Constitution is a simple thing. The world failed until it was adopted. It progressed when we followed it; and since we departed from it, it has grown more and more chaotic."

Not Strong Enough.

"So," sobbed Ilma Vladoffovitchskioffsky, "Ivan died in battle. You say he uttered my name as he was dying?"

"Well, not all of it, Ilma," answered the returned soldier; "just part of it."

A hundred years from now most of the millionaires can say that their ancestors were butchers.

Must Co-Operate For World Trade

"There is no doubt that for a long time to come there will be business for Americans to do," was the message of Allen Walker, manager Foreign Trade Bureau, Guaranty Trust Company of New York, whose paper on "Banking Facilities the Key to Trade Expansion," was read at the National Association of Cotton Manufacturers. "In more than one sense this land of ours is the hope of the world, but we must remember that it is a present hope. The probability is that the war experience through which they have just passed will lead those now dependent upon us to seek with redoubled energy to establish an independence of us and to avoid a recurrence of their present difficulties in respect to food, raw materials, machinery, construction material, and other things which they now expect to get from us.

"The business men of America are chiefly concerned, therefore, with that arrangement of various factors in the situation, with that use of the present opportunity, which will promise most for the long future.

"Now that the war is over we have a new and difficult situation to face. We could not go back into the old ways, even if we wanted to. Every right thinking man feels that there are international as well as national obligations and that having entered during this war emergency upon a period of large production and international trade, it is our duty not only to ourselves and our country, but to the whole world to keep going. Comparatively speaking, we are amateurs. Generally speaking, we have made no study of foreign requirements. We are inclined to think that the kind of goods we manufacture and the way they are manufactured should suit everybody.

"Here is a problem that can only be solved by a closer affiliation among manufacturers, exporters and bankers. And such an affiliation will appear the more advantageous when these interested parties become thoroughly acquainted with the services which one can offer the other. Our merchants and manufacturers must become thoroughly and practically acquainted with the financial machinery for marketing and distributing their goods, both at home and abroad.

"It is certain, for instance, that our exports to Latin America will not reach their peak until we extend as favorable terms as our conservative competitors. Of course, this does not mean that the American manufacture has to hamper his business by long, unjustifiable credits. It is seldom that the reputable foreign buyer asks for terms exceeding ninety days.

"Bank credit bridges the gap between the raw material and the finished production—between production and distribution. There is no mystery and little complexity about financing foreign trade. The principles are the same as in domestic business. There are only the differences in language, differences of currencies, and the greater dis-

tances.

"It requires the undivided attention of highly trained experts to deal successfully in foreign exchange and for all the various, newly-developed methods of financing products for export highly trained men are necessary, not to speak of a world-wide organization to accommodate buyers and sellers the world over.

"The larger the bank the better its facilities ought to be, and the more economy in conducting its transactions, with resultant good to business generally. While a comparatively small number of banks deal directly with the European banks, there is hardly a bank in the United States which does not have transactions that are a direct result of exports or imports. The larger institutions are the channels through which these transactions ultimately find their way to foreign countries and make it safe for the bankers of the country at large to finance shipments of products to foreign countries.

"Heretofore it has been one of the great advantages of the European countries in foreign trade that their branch banks in various parts of the world, or the correspondent banks with which they allied themselves, have put them in the way of much business. Their banking houses in the less developed countries have been centers of influence. Members of the staff have kept in touch with local industrial and commercial affairs and have been able to keep exporters at home informed of new opportunities. Previous to the passage of the federal reserve act our banks were greatly restricted in establishing themselves abroad. That has been changed materially now and many of our larger banks are establishing branches or relationships abroad which will contribute greatly to the fostering of trade relations. Of course, all this does not mean that any and every manufacturer must necessarily do his business direct with a large institution in order to procure the necessary accommodations in respect to foreign trade. He can do it through his local bank anywhere, and the local bank can use the large metropolitan institutions as a clearing house.

"From the war we have learned the usefulness and the wastefulness of untrained effort. There are no training camps for business men, though they are urgently needed. The merchant and the manufacturer are just beginning to work together and to exchange opinions and experiences. If America is to be the leader in the contest for the world's trade there must not only be co-operation; there must also be no limits to our commercial vision.

"It is obvious that the salesman's success depends largely upon the management of industry at home. And in the critical period of readjustment it is important that industry shall be definitely pointed toward the proper goal. Industry must have a chance to realign its cohorts. The number of workers returning to their former tasks

must be regulated by the rapidity with which industry turns from the business of war to that of peace and the extent of industrial expansion in new undertakings.

"Capital will come readily to the aid of foreign trade if such trade is properly conducted. Probably we shall have competition from other nations for these stores of usable wealth, but the American foreign trader who selects his territory wisely, who conducts his business with care, should be able to match and to overmatch his rivals on the score of capital as well as everything else.

"Shipping facilities, banking and credit arrangements, investment of capital abroad and for organization of exporters for united action are all of the greatest importance in international trade. Realizing the necessity of banking and credit facilities to finance their transactions, foreign nations in the past have not only established connections with banking houses in every land, but they have established banks of their own in all parts of the world. Banks with their main offices in London, Berlin, Paris, Rome and Vienna, have operated hundreds of branches and agencies in South America, the Orient, Australasia, the Levant, all around the coast of Africa, and far within the interior. These banks give the foreign exporter information, extend credit, finance his transactions and constantly strive to increase the foreign business of the Mother country. Up to the past year or two few foreign branches of American banks were established, and in most markets the exporters of the United States had to depend upon foreign bankers.

"Though now increasing, foreign investments abroad have been comparatively small. British, French, German and other foreign traders, on the other hand, have enjoyed a peculiar advantage from the billions of dollars of investments made by the fellow-nationals in foreign countries, frequently on the expressed condition that supplies and equipment should be purchased in the country furnishing the funds. British and German investments in South American railways and public utilities, French investments in Turkey and Asia Minor, and Japan-

ese investments in China and Manchuria are typical examples. In consequence, American manufacturers have frequently found it impossible to sell their products abroad because the prospective customer was forced to purchase from or through interested investors.

"American financial institutions are now trying to do their part to remedy this state of things. It is very sure that American capital henceforth will be furnished to finance industries in foreign countries, though it will doubtless take considerable education of the American investor to make him realize that the difference between foreign and domestic securities is only a matter of distance. The habit of investing in foreign securities will probably be developed only after a considerable amount of commercial credits, as differentiated from capital, have been extended.

"It has been said that America, possessing more surplus gold than any other country today, might relieve the European scarcity by taking industrial bonds at a profitable rate of interest, or foreign government bonds at a lower rate, either case contributing to a revival of business which would mean greater value for the millions of foreign securities now held in the United States. To what extent this business may develop into actual practice, however, is something which the processes of evolution during the next twelve months will help to decide.

"The rest of the universe is going to make a tremendous demand upon the productive energies of the United States, and the processes of

Protect Your Product
From Oil Stains

With the present cost of raw cotton, it has become more and more imperative for the textile manufacturer to reduce spoilage from oil stains to a minimum.

This can be accomplished by the use of NON-FLUID OIL, Special Textile Lubricant.

NON-FLUID OIL is manufactured from the very highest grade petroleum which by a special process has been reduced to a non-dripping consistency. The striking advantages of this lubricant may be readily seen when you consider the enormous losses due to stained goods that usually confront the textile manufacturer.

Saving in power—Reduction of machinery upkeep costs. Increased production and increased profits are the advantages accruing from NON-FLUID OIL. These are explained in our Bulletin on "Lubrication of Textile Machinery." Send for your copy today.

transition from highly stimulated to normal production must be operated carefully and guided reasonably if the machinery is to escape jolts and breaks. We cannot hurriedly apply economic law where for years military law has entirely prevailed, and we shall profit if content to go a little slowly. We must sagaciously strengthen the forward movement in government, economies, industry and society, and look neither to the demagogues, nor to the reactionaries for our course. It is not what any class has gained or lost by the great tragedy of the past four years, it is what mankind as a whole has gained or lost that bids us to be sober and patient in anticipating the evolutions of the next decade.

"Already there are very definite indications that manufacturers and merchants in the United States will take full advantage of the facilities offered by the Webb bill for operation in the world's markets. A number of groups, representing the major industries, have gotten together and discovered that a spirit of co-operation developed during the war really means something, and that leading men in the several lines of business are quite ready to pool their products and their finances in connection with foreign trade expansions.

"He who would be successful must watch closely the currents of

trade as they reshape themselves after this war. The commercial way is being remade. The arrangement of the highways of the sea, which began with the opening of the Panama canal and which was temporarily checked at the outbreak of the war, will be carried out. There will be a shifting of the strategic trade centers of the world. The great vantage points of commerce will rise or decline in power, according to rearrangements of the currents of international trade. Some will sink into obscurity, others will become richer and more powerful and be the centers of the commercial struggles of tomorrow.

"This would mean world leadership for the United States with its resources of men, materials and money such as no nation from the beginning of time ever possessed. It means a horizon as broad as the earth. We must rise to the great opportunity, created partly by circumstances, but largely by the native ability and initiative of our people. The prospect is so brilliant as fairly to dazzle the imagination. But its realization will come only after we have successfully fought our way to victory. And its materialization imposes upon us the grave responsibility of discharging our duties to mankind with thoroughness and honor, as becomes those who would sustain the fair name of America throughout the world."

Forming World's Largest Cotton Warehouse Chain

Preliminary organization was effected of what promises to be one of the largest cotton warehousing companies in the world to operate a chain of warehouses in the South and North, starting with a capital of \$20,000,000, and backed by leading manufacturers, cotton merchants and bankers. It is the culmination of a movement inaugurated by the Cotton Buying and Storage Committee of the National Association of Cotton Manufacturers, of which Randall N. Durfee, treasurer of the Border City Manufacturing Company, Fall River, Mass., is chairman, and is designed to meet an urgent demand for fireproof warehouses, licensed under federal laws, and issuing negotiable receipts that will be acceptable as collateral by domestic and foreign banks. It is proposed to start with an initial capacity of 1,500,000 bales, of which about 500,000 bales will be in existing warehouses that will be purchased, the ultimate capacity to be about 3,000,000 bales.

The members of the organization committee represented at Saturday's meeting in person or by proxy were as follows: Bernie L. Anderson, Neil P. Anderson & Company, Fort Worth, Texas; J. T. Broadbent, Meritas Mills, Columbus, Ga.; W. Irving Bullard, Merchants' National Bank, Boston, Mass.; A. J. Dossett, Texas City Compress & Concentration Company, Waco, Texas; W. R. Drake, Jr., Merchants' National Bank, Raleigh, N. C.; Randall N. Durfee, Border City Manufacturing Company, Fall River, Mass.; Charles H. Ely, Monks & Johnson, Boston, Mass.

James Inglis, American Blower Company, Detroit, Mich.; J. E. Latham, Latham-Bradshaw Cotton Company, Greensboro, N. C.; O. W. Messimer, Imbrie and Company, New York; W. D. Nesbitt, Warrant Warehouse Company, Birmingham, Ala.; L. K. Salisbury, Delta Planting Company, Memphis, Tenn.; Wade Cothran, Cooper & Griffin, Greenville, S. C.; W. G. Turner, Memphis Terminal Corporation, Memphis, Tenn.; Morton C. Tuttle, Aberthaw Construction Company, Boston, Mass.; Rufus R. Wilson, Secretary National Association of Cotton Manufacturers, Boston. In addition, members of the committee will be selected to represent the following important cotton centers: Houston and Dallas, Texas; Oklahoma City, Okla.; Pine Bluff and Little Rock, Ark.; Montgomery and Birmingham, Ala., and Brunswick, Ga.

The committee effected a temporary organization with Randall N. Durfee of Fall River as chairman, and Rufus R. Wilson as secretary. The treasurer of the committee is W. B. Drake, Jr., of the Merchants' National Bank, Raleigh, N. C. The committee authorized the engagement of engineers to make a survey of the plans and the plants to be taken over and prepare a report for submission to underwriters; it is understood that Monks & Johnson, of Boston, are to do this work. A sub-committee on underwriting was elected as follows: Rufus R. Wil-

son, chairman; W. B. Drake, Jr., Randall N. Durfee, of Fall River; W. G. Turner, manager, Memphis (Tenn.) Terminal Corporation, and Morton C. Tuttle, of the Aberthaw Construction Company, Boston.

Mr. Turner, who is one of the most experienced cotton warehouse men in the South, is prominently mentioned as being slated for the managing head of the new company. It is also reported that the plans contemplate negotiations for the Memphis Terminal Corporation's warehouses, and also those of the Warrant Warehouse Company, of Mobile, Ala. Plans for underwriting the company are said to be well under way. In addition to the \$20,000,000 of common stock, the financing will involve \$15,000,000 of first mortgage, 50-year gold bonds bearing 6 per cent interest. The plans of the corporation, as explained in a preliminary prospectus, are, in large part, as follows:

The Union Warehouse Corporation is to be organized for the purpose of purchasing, leasing and otherwise acquiring, existing warehouses; remodeling them, and erecting new, modern warehouses at important Northern and Southern points for the storage of cotton. Also, in response to an insistent and increasing demand for more economic methods, it will eventually engage in the business of compressing, baling, banding and covering cotton in a manner that will assure a high grade of efficiency in operating methods, will eliminate much of the economic waste, converting the same into a profit for the corporation, and will go far towards averting the danger of future foreign competition. At as many of the warehouses to be purchased or erected as is deemed advisable, there will be installed a modern compress plant, where bales of cotton may be compressed to a high density, properly covered and banded in a manner that will insure safe transportation without injury to the fiber. All warehouses will be installed with modern facilities for economic handling in and out and with appliances for weighing and certifying the cotton as to weight and grade.

All warehouses will be constructed on the "unit system," each unit capable of storing about 10,000 bales, the warehouses being thus capable of expansion at a minimum cost to meet the requirements of future growth. All warehouses will be of fireproof construction, installed with modern sprinkler systems. They will be built in strict accordance with underwriters' requirements, and the cotton will be stored in them so as to enable the lowest rate of insurance to be obtained. In general, all warehouses will be so constructed and operated that receipts issued for goods stored therein will be prime evidence of ownership, weight, grade and deliverability, and will be acceptable as collateral at all banks that make a practice of loaning money on cotton to the end that the receipts for goods stored in one of the ware-

houses of the Union Warehouse shall be subscribers to the capital Corporation will be acceptable as stock of the corporation. THURSDAY, MAY 1, 1919

Tricks of the Department of Labor.

The child labor section of the federal revenue law went into effect upon April 25th and we have repeatedly advised the cotton mills to carefully observe its regulations and to co-operate with the department of internal revenue in its enforcement. One section of the law provides a penalty of \$1,000 for refusing to admit an **authorized** inspector to the mills but there are no "authorized inspectors," except those sent out by the department of internal revenue.

Information has come to us that the childrens bureau of the department of labor is sending inspectors to cotton mills, who either state or imply that they are connected with the enforcement of the present child labor law.

Judging by the work recently performed by such inspectors their object is to obtain information that will be distorted and misrepresented to the injury of the mills.

The fact that an inspector is employed by a government department does not give him or her any authority to enter or inspect any cotton mill. Unless especially authorized as are the inspectors of the revenue department they have no more authority or right to enter a mill than a walking delegate from a Fall River labor union.

Inspectors from the department of internal revenue should be ad-

mitted and assisted in every way but be sure that they are from that department before admitting them.

There can be no offense in asking to see the authority of any inspector before admitting him or her.

The childrens bureau of the department of labor will use almost any trick to obtain material upon which to attack our mills and they should not be given opportunities for such work.

Mill Building Resumed.

While cotton manufacturing conditions have not reached a point where there is any real profit in manufacturing they have improved to the extent of restoring confidence in the future. The best evidence of this is that ten new cotton mills have been organized or are now in process of organization. Six of these mills have been announced and we have definite information about the others.

Why should the South not build mills? It has now only 15,000,000 of the 132,000,000 spindles that were in the world at the beginning of the war. The countries of Europe that did not have their cotton mills destroyed or disorganized by the war now have them so badly handicapped by labor unions that full production is impossible and the building of new mills is out of the question.

Last week a prominent thread manufacturer of Canada paid us a

call, while in the South buying yarns, and said that while he had always purchased his yarns in England, it was no longer possible for England to compete with the south because of labor troubles.

We talked last week in New York with New England cotton manufacturers and they painted a gloomy picture of the future with labor troubles almost daily before them.

If we can arrange some way for certain young attorneys and organizers to make a living without promoting hatred and passion in our Southern mills we will be the only cotton manufacturing section of the world that is free from labor troubles and in a favorable position.

Our operatives are friendly with the mill managers because there has been fair treatment and co-operation from both sides and we do not believe that there will be permanent labor troubles in the South. If the old spirit of friendliness continues between employers and employees, the great export trade that is sure to come will force an expansion of our textile industry far beyond our present 15,000,000 spindles.

The Imperial Valley of Southern California is allied with the South and is one other section that is optimistic of the future of cotton manufacturing as will be seen from the following letter:

Mr. David Clark,
Managing Editor, Textile Bulletin,
Charlotte, N. C.

Dear Sir:

I have your favor of the third, and in reply will say that if you will be good enough to forward me the names of the practical cotton manufacturers and engineers you refer to in your letter, I will greatly appreciate the favor.

It would be more or less of an impossibility to tell you at this time what we hope to manufacture from raw cotton as we have not gone that far into the matter. We have over \$60,000,000 worth of raw cotton raised in this state ever year and but one cotton mill and that is located in Oakland, Calif. As far as the amount of capital we have behind us will say that it is unlimited as the largest financial men in Southern California are back of the plans.

What we hope to eventually do is to make all cotton goods that are used in any great quantities from the cotton mill that we establish here.

Thanking you very much for your most courteous letter, I am,

Yours very truly,

T. R. Tingle.

In recent years a large cotton growing industry has been developed in Southern California and they now propose to manufacture part of that cotton into the goods that are used upon the Pacific coast.

The freight rates from New England and the Southern states to California are very high and this saving in freight will, according to those interested, represent a very handsome profit upon the capital invested in California mills.

The building of mills in California is a matter of the future but a resumption of mill building in the South is assured, in fact, has already begun upon a considerable scale.

Big Community House at Drayton Mills.

Within six weeks the contractors working for the Drayton Mills Company, Spartanburg, S. C., expect to have ready what will be one of the three largest community houses of any mill village between Atlanta and Richmond. The building is finished outside already, except the roof, and the inside is ready for the plastering to be begun.

The new building is located in the western part of the park which surrounds the mill, and in a place which is easily accessible to all those living at Drayton. It is planned to have it ready to open by June 1. The building, which is of brick, will cost when finished, nearly \$22,000, and will contain a library, a large gymnasium, rooms for night school, bath rooms for both men and women, reading rooms, lounging rooms, a moving picture room and other features.

In addition to this large new community house, the owners of Drayton Mill are improving the mill and the village in many ways. All the wood work in the mill is being taken out, and new material is replacing it. Sanitary toilets and a sanitary water system is being installed. The plain looms that have been used for many years are giving way to Draper looms. All modern equipment is being installed. The entire mill will be repainted inside in shades that will make the inside of the building lighter and the newest methods are being used in the manufacture of the goods.

The new office buildings and a large store house is being erected at a cost of about \$45,000, and new concrete platforms have just been finished, as well as a new brick warehouse.

The chief innovation at the mill village, however, is the formation of what is known as the Drayton Mills Welfare Association. This is an organization made up of mill officials and operatives for the purpose of carrying on the social work of the village. B. M. Montgomery, president of Drayton Mills, is president of the association; G. Roquie is treasurer, and L. A. Ramsey is secretary and treasurer. There are, in addition to these officers, various committees which have in charge all activities at the village. When any new feature is contemplated it is given to the committee in charge of that activity, and acted upon and reported to the main committee for adoption or rejection. In this way the villagers themselves manage the affairs of the entire settlement, and decide what new activities they will begin.

Personal News

W. F. Quinn is now overseer of carding at Irene Mills, Gaffney, S. C.

R. G. Vandore is now superintendent of the Beverly Mills, Middleton, Ga.

C. Barton is now overseer of weaving at Anchor Mills, Huntersville, N. C.

T. J. Rush has resigned as overseer carding at Buck Creek Mills, Siluria, Ala.

B. C. Roberts has accepted position as overseer carding at the Buck Creek Mills, Siluria, Ala.

I. Z. Norris has resigned as spinning overseer of No. 2 room at the Thomaston (Ga.) Mills.

John Hughes has been made overseer of the carding room at the Palmetto (Ga.) Cotton Mills.

Edward Coggins has accepted a position as overseer of weaving at the Palmetto (Ga.) Cotton Mills.

Carlton Oates has been promoted from second hand to overseer of weaving in the Tire Fabric Room of Thomaston, (Ga.) Mills.

John Hunt has resigned as overseer carding at No. 1 room of the Thomaston (Ga.) Mills and accepted position with Cuers Textile Mills.

Wm. Crawford has resigned as overseer of spinning at the Hampton (Ga.) Mills and accepted position with Georgia Mills No. 2, Griffin, Ga.

W. G. Thompson, formerly with Fulton Bag and Cotton Mills, Atlanta, Ga., is now overseer of spinning at Beverly Cotton Mill, Middleton, Ga.

E. M. Hoover, formerly master mechanic of the Shuford Mills, Hickory, N. C., now has a similar position with the Myrtle Mill, Gastonia, N. C.

D. A. Reed has been promoted to superintendent of the Hogansville (Ga.) Manufacturing Company. He was formerly overseer of spinning and twisting.

Paul Nuckols has resigned as carding overseer at the Exposition Mills, Atlanta, Ga., and accepted a similar position with Indian Head Mills, Cordova, Ala.

J. W. Starnes from Flint Mill, Gastonia, N. C., has accepted position as overseer of spinning, twisting and winding at Cleghorn Mills, Rutherfordton, N. C.

J. J. Graham, formerly overseer of carding at night at Rex Spinning Company, Ranlo, N. C., is now overseer of carding at Cleghorn Mills, Rutherfordton, N. C.

C. H. Savage, superintendent of the Mt. Vernon, Nos. 1 and 3 of the Mt. Vernon Woodberry Mills, Baltimore, has resigned his position on account of ill health.

Robert A. Morgan, assistant agent of Marginnis Cotton Mills, New Orleans, La., was in Charlotte last week buying some new machinery which they plan to install soon.

T. J. Prince from Holt Williamson Manufacturing Company, Fayetteville, N. C. has accepted position as overseer of spinning at Weldon Manufacturing Company, Weldon, N. C.

J. G. Flood, who has been with Monticello (Ark.) Cotton Mill for a number of years has accepted position as master mechanic for Apogang Manufacturing Company, Kosciusko, Miss.

J. S. Gammon, Neil McQueen and D. R. Hinkle, former employees of the Exposition Mills, Atlanta, Ga., have arrived back from overseas service with the American Expeditionary Forces.

William T. Sizemore has been promoted from second hand in spinning in the number one mill of the Highland Cotton Mills, High Point, N. C., to be overseer of spinning in mill number two of the same company.

Superintendent John F. Scott, of the Edna Mills, Reidsville, N. C., has received a cablegram from his son, Paul Scott, advising him that he has sailed from France. - Mr. Scott has been in service over there for some time.

Eugene H. Timanus, formerly superintendent of the Druid Mill of the Mt. Vernon Woodberry group, Baltimore, has been appointed superintendent of the Mt. Vernon Mills Nos. 1 and 3, to succeed C. H. Savage, resigned.

H. C. Harris, who has been overseer of carding for the Cheraw Cotton Mill, Cheraw, S. C., since that mill began operation, has resigned to become overseer of the new No. eight card room of the Wiscasset Mills Company, Albemarle, N. C.

E. K. Davis has received his discharge after seeing service in France in the aviation corps where he held a commission and has resumed his duties as assistant purchasing agent for the Fulton Bag and Cotton Mills, Atlanta, Ga.

W. P. Hazelwood, who has been assistant manager and superintendent of the Profile Cotton Mills, Jacksonville, Fla., for the past six years has resigned to accept a similar position with the American Net and Twine Company, Anniston, Ala.

The Sadi Cotton Mills.

The name of the Laura Cotton Mills, which was reported last week as having been organized at Kings Mountain, N. C., has been changed to the Sadi Cotton Mills. The company was incorporated with a capital stock of \$150,000 by R. L. Mauney, T. M. Plonk and others.

MILL NEWS ITEMS OF INTEREST

Shelby, N. C.—C. E. Neisler is installing 24 machines for the production of bed spreads in the Pauline Mill. This will be a unique spread. It will be known as the "rippollette" spread. It is a dimity with a seersucker stripe.

Gastonia, N. C.—C. B. Armstrong and associates, who are to build another cotton mill here, as noted, will complete organization of a \$500,000 company at an early date and start construction of the mill buildings. A site of between 60 and 70 acres has been purchased.

Monroe, N. C.—The Bearskin Cotton Mills started up five thousand spindles last week on 30s hosiery yarns. This is all new machinery of the latest model. Thirty modern bungalows have been completed, every house having a bath room, electric lights, sewerage and water supply. A community cow shed and pig pens have been built aside from the village and 30 acres of fine meadow land furnish grazing for the cows. The village streets are well laid off and abundantly lighted.

Laurens, S. C.—Preliminary work incident to the rebuilding of the Laurens Cotton Mills village recently noted, is making good progress. Thirty cottages have been dismantled and material for the new houses is being made up. A topographical survey of the village is being made by the landscape engineer who has been employed by the company to lay out the streets anew, locate the cottage sites and in general make up a new town. The exact type of house for operatives has not been determined but they will most probably be of the bungalow order. They will be larger than the present cottages; will be fitted out with electric lights and waterworks. It is proposed to make the Laurens mill village more attractive and provide the help with some of the modern conveniences.

Lloyd Cotton Mills to be Sold.

C. B. Armstrong, receiver of the Lloyd Cotton Mills, Maniposa, N. C., will sell the plant and property of the company at auction on June 3rd. Besides the cotton mill plant, about 100 acres of land will be included in the sale, together with a number of tenant houses. The Lloyd Cotton Mills were placed in the hands of a receiver some time ago, as noted, by the Citizens National Bank of Gastonia.

New Steel Roller Repair Shop.

The Carolina Steel Roller Shops is the name of a new industry just started in Gastonia, N. C., by T. H. Sahms and W. N. Sharp. They will repair cotton machinery and are especially equipped to re-neck and re-flute steel rollers and re-point and sharpen spinning spindles. The proprietors of the Carolina Steel Roller Shops are well known to

Southern cotton mill men, having been in this business for several years and are thoroughly competent. They anticipate a big business and guarantee satisfactory work.

The Peck Carrier.

The Peck Carrier is the title of the latest publication, No. 220, of the Link Belt Company, and describes and illustrates their Peck overlapping pivoted bucket carrier for the economical and efficient carrying of coal, coke, ashes, cement, sand, ore and other materials.

This book carries 95 pages of interesting and valuable information concerning conveying systems. It is profusely illustrated with both photographs and drawings and will doubtless prove of much value to anyone interested in conveying systems.

Commissioner Graham Announces Delegates.

Raleigh, N. C.—Commissioner of Agriculture W. A. Graham, an-

nounced the appointment of a number of delegates from this state to the World Cotton Conference, at New Orleans, October 13-16. The delegates are J. A. Brown, Chadbourn; George A. Holderness, Tarboro; J. A. Walker, Charlotte; D. B. Armstrong, Gastonia; W. B. Cooper, Wilmington. The commissioner asks that any other citizens of the state interested in the matters to be considered at this convention and who is desirous to go, he will be glad to commission them as delegates as it is impossible for him to ascertain just who desires to make the trip.

Armstrong Corporation Purchases Mill Site.

Gastonia, N. C.—Among a number of important realty transactions made recently was the purchase by the Armstrong interests of a site for their large new mill. The tract purchased embraces between 60 and 70 acres lying on both sides of the York road and west of the Carolina & Northwestern railway, south of the city limits. This tract was pur-

chased from three different parties, W. S. Holland, T. R. McArver and Balthis brothers.

It is understood that rapid progress is being made on the details necessary to be worked out before application is made for a charter and the actual organization of the company is begun. The capital stock of \$400,000 is all subscribed or in sight, and decision will be announced probably within a short time as to the name of the new mill.

Capt. E. E. Wright Goes With Wm. C. Robinson & Son Company.

Captain E. E. Wright, son of the late E. H. Wright of Shelby, N. C., is about to represent the Wm. C. Robinson & Son Company, making his home in Greenville, and handling their business in the Piedmont section.

Captain Wright left Shelby when a young man, attending the University of Pittsburgh. After graduating from this college he went to Salt Lake City and worked his way up to assistant division engineer of the S. P. L. A. & S. L. Railroad. He later went to Buffalo, N. Y., and became assistant city engineer. The day prior to the United States declaring war upon Germany, E. E. Wright enlisted in the United States army. He went to France in 1917 with the field artillery and was commissioned while in the field. Captain Wright led his battery and was in action at Chateau Thierry, Soissons, St. Mihiel and Argonne Forest. He was gassed in one of the encounters and badly wounded with high explosive during one of the last drives.

Captain Wright was discharged from the service April 14, 1919.

Sanitary Engineering Company.

The Sanitary Engineering Company of Charlotte has acquired property at Camp Green and installed a plant for the manufacture of their well known sewage disposal systems. W. E. Thomas, who is at the head of the company, which was established about four years ago, has been in army service for a year, during which time he was engaged in installing sewage disposal systems for the government.

The company has been very successful since its organization, having sold over 10,000 of their systems. They have placed a great many of them in various Southern cotton mill villages and the mill owners have endorsed them very highly.

The company offers an adequate solution of the sewage disposal problem. This of course in the larger cities is taken care of by modern sewer systems, but in the smaller communities, especially in the rural districts, proper sewage disposal has long been a problem with a vital bearing on health conditions. When poisonous organic waste and other matter is allowed to flow into the open or stand in the open cess

377 West Madison St., CHICAGO.

pool, a swarming place for flies and an ideal breeding place for disease germs is the result.

The systems manufactured by the Sanitary Engineering Company are designed along unique and scientific lines, affording a sewage disposal system that does its work efficiently and meets with the approval of the health authorities. All parts are manufactured of concrete, except the connections, which are of vitrified pipe, making the plant permanent.

The plant requires no attention and no chemicals are used. It is installed just beneath the surface of the ground. There is no operating cost.

"We Must Clothe World," Say Cotton Manufacturers.

That American manufacturers will be called upon to clothe the world during the coming winter, was one of the points that was brought out at the meeting of the National Association of Cotton Manufacturers at their meeting at the Hotel Biltmore. The scarcity of clothing throughout the world was emphasized, and the tendency on the part of some cotton manufacturers to shut down on production, when that production was so vital for the clothing of the world, was decried.

The shipping situation as a factor in getting the clothing to the people of the world was discussed, but it seemed to be the general opinion that this problem would be solved. Production to the utmost was stressed as the goal to be sought, firm in the belief that the means of transportation would be found at the proper time.

Fine Outlook for Future Business.

Washington, D. C.—A comprehensive report on the general business outlook has just been issued by the Chamber of Commerce of the United States. The report is optimistic as to future conditions and forecasts a period of unusually good business. That part of it which refers to the textile lines says:

The cotton and woolen industries are seen in a hopeful light, special emphasis being put on the hopeful prospects of export business in the products of these industries. The situation in this field is characterized as follows:

"Stocks of cotton on February 26 were in round numbers six million bales, about one million bales more than last year. Southerners are relying on export business to keep prices high but ships are hard to get and internal troubles in Russia and Central Europe have upset the foreign market. The attempt to restrict acreage has been tried before but has always failed because of lack of co-operation but this year observers agree there will be some reduction in acreage.

"In February, 1919, there were 300,000 less active spindles than in the same period of 1918 and the production of cotton fabrics responded to the decrease in demand. Not long after the war the mills cut prices so that the fear of buyers as to a constantly declining market were largely eliminated. The general expectation is for a steady improving demand. Buying of underwear and hosiery is heavy. Business in men's wear is excellent. The export situation is encouraging.

"The dominant feature of the wool market is a surplus of raw material. The general feeling is that the bottom of the hill has been reached in production and that for the remainder of the year there will be a gradual ascent. The woolen industry has suffered from constant strikes. Export figures are encouraging."

Ball Bearing Companies Combine.

S K F Industries, Inc., of New York, write us as follows:

"Through an unfortunate slip in our copy department, the recent news item was sent to you announcing in error that the reorganization of our interests, effective May 1st, would be a physical consolidation of the underlying companies. The new company—S K F Industries, Inc.—will be simply a holding, sales and engineering organization, as per the revised copy of the news item below.

"A telegram regarding this has already been sent you, and we shall greatly appreciate your acknowledgement of the receipt of this letter."

The item should read as follows: Of interest to all users of bearings is the just announced reorganization, effective May first, whereby the products of the Hess-Bright Manufacturing Company, the S K F Ball Bearing Company, the Atlas Ball Bearing Company and the Hubbard Machine Company will be sold through one central organization. The new company, under the name of S K F Industries, Inc.,

AMERICAN HIGH SPEED CHAIN

Seventeen years the business of American High Speed Chain have given to proving and improving steel chain belting for transmitting power. They are pioneers in the design and manufacture of this chain.

This long experience has established one important truth—That the mechanically simple construction which distinguishes American High Speed Chain most fully meets the requirements of all conditions of service.

We have also learned that neither belts nor gears should be used where it is possible to use chain drive. Are you ready to believe that? Is it worth anything to you to know it if it should happen to be true?

will thereby be able to offer a comprehensive line of ball bearings, including the Hess-Bright deep-groove type, S K F Self-aligning radial and thrust bearings and ball bearing pillow-blocks and shafting hangers.

Through the medium of its engineering organization, backed up by a well equipped laboratory, the new company will be able to place at the service of bearing users the knowledge gained in many years study of anti-friction bearings of all kinds. On request, manufacturers' problems will be analyzed in detail and that type of bearing recommended which (independent of sales considerations) is best suited to the conditions met. In addition the laboratory staff will carry on research studies affecting anti-friction bearing design and application.

The new company—S K F Industries, Inc.—will be under the direction of B. G. Prytz, president; W. L. Batt, vice president. The principal office will be at 165 Broadway, New York City with branches at Boston, Philadelphia, Atlanta, Buffalo, Cleveland, Detroit, Cincinnati, Chicago, and San Francisco.

Cotton Growing in Andalusia.

The fact that Spain has begun to realize its economic dependence on foreign countries and feels that the United States will probably need all its raw cotton for home consumption in textiles has resulted in the appointment of a commission which was sent to Andalusia by the Catalan cotton committee to investigate the experiments in cotton growing that have been made in Jerez, Malaga, Murcia, Valencia, and the Province of Seville and to determine the possibility of raising the plant successfully on Spanish soil.

The report of this commission is extremely encouraging, a large profit being claimed on the original out-

lay. Experiments show that the soil of Andalusia is admirably adapted to cotton raising and that, in addition to the land already prepared for other crops, such as cereals and vegetables, vast swamps could be reclaimed and utilized for this purpose. It is claimed that each hectare (2.47 acres) will produce 500 kilos (1,102 pounds) and that enough cotton to supply the Spanish market could be raised on 200,000 hectares (494,209 acres). This product, the experiments show, would be equal if not superior in quality to that grown in the United States, although measures would have to be taken to protect the crop from the heavy fall rains.

The farmers are being instructed in the raising of the plant, and the Catalan mill owners, where most of the cotton imported from the United States is worked into textiles, will assure the ready market. Agriculturists in this district are showing great interest in the project and are co-operating enthusiastically with the Catalan committee.

Advance Notice of Exhibits

(Continued from page 7.)

They will show in their exhibit a large relief map of the world on which will be indicated their nine domestic offices, their eight foreign offices, and the fourteen foreign localities in which they have direct agencies. It will be of interest to their mill representatives and other friends in the textile industry, to see graphically the many channels through which their mill products are distributed.

There will be displayed on either side of the entrance an exact reproduction of the Statue of Liberty, including the "Light the kaiser couldn't put out." Comfortable lounging corners will occupy the remainder of the booth and telephone service will be maintained for all visitors.

The Hunter Company's exhibit is located in sections 217, 218 and 219, and will be in charge of Mr. Robert F. Bowe, and Mr. Samuel F. Gibson, both from their New York office.

National Lamp Works.

The National Lamp Works exhibit will consist of a rack of lamps arranged to show late developments in the lamps themselves. This will display lamps which are most generally employed in industrial lighting. Another rack will show the most approved reflector equipment for use with the lamps, including the Reflector-cap unit so well adapted for industrial plants where avoidance of glare is very important, the Ivanhoe Ave (1350), a late and very efficient design of the semi-enclosing type of unit, and the RLM dome reflector. To emphasize the need of proper selection, and to

offer an example of bad practice, a flat reflector with a bare lamp is also shown.

Small exhibits will be used to point out the result of some common faults found in lighting system design. One exhibit will demonstrate the effect of improper intensities upon illumination; another, the effect of glare upon an otherwise satisfactory lighting system; and a third, the effect of shadow in the perception of objects in their three dimensions. A ribbon booth, illuminated with several different lamps, ranging from carbon to "day-light," will be used to show the great variation in colors under artificial illumination and to illustrate the importance of using the "day-light" lamp in industrial and commercial work which requires strict color discrimination.

To bring the advantages of modern industrial lighting at "productive intensities" before the eyes of the interested public by means of lantern slide projection, a stereomograph is included. The foot-candle meter will be displayed and demonstrated. This instrument is widely used to measure the illumination intensities commonly found in artificial lighting installations. It is an instrument so simple that anyone can operate it, so light and compact that it can be carried anywhere, and sufficiently accurate to be of real practical value. A selective chart which aids materially in the accurate selection of reflecting equipment will also be featured.

The exhibit will be in charge of Mr. Ward Harrison, illuminating engineer of the National Lamp Works, who will be present at the exposition, May 5th and 6th. He will be

assisted by Mr. J. M. Ketch, who will be present during the entire exposition.

Clipper Belt Lacer Company.

The Clipper Belt Lacer Company, of Grand Rapids, Mich., will have on display a number of their Clipper Belt Lacers. The advantages of these machines lie in the fact that each operator can lace his own belt. The lacer can be carried to the belt, permitting the lacing to be done without removing the belt from the shaft.

The Veeder Manufacturing Company

The Veeder Manufacturing Company, of Hartford, Conn., well known manufacturers of counters, will have a number of their machines in operation at that exhibit. Some of the company's products are cyclometers, odometers, tachometer counters, speed counters and fine die castings. W. C. Waldo will be in charge of the exhibit.

Economy Baler Company.

The Economy Baler Company will not show any of their machines at the exposition, but have reserved space 324 where their representative, J. S. Hulme, will be glad to see his friends.

Detroit Graphite Company.

The Detroit Graphite Company will not have an exhibit at the show, but will have a booth in charge of Mr. Cureton and Mr. Perry.

Electro Bleaching Gas Company.

The exhibit of the Electro Bleaching Gas Company, 18 East 41st street, New York City, pioneers and leading manufacturers of Liquid Chlorine for commercial purposes will be an attractive and interesting one.

It will be in charge of James B. Duggan, who has represented the company as their expert in the tex-

tile field ever since its organization.

The exhibit will show cylinders of Liquid Chlorine of 100 pounds capacity as shipped from the plant of the company at Niagara Falls, N. Y., to the mill owner to use for bleaching purposes.

There will be a complete and interesting display of raw and finished bleached textiles.

The E. B. G. brand of Liquid Chlorine is widely known as the "100 per cent Bleach" and visitors at the exposition are invited to arrange with Mr. Duggan for a free demonstration at their mills.

C. J. Tagliabue Company.

The C. J. Tagliabue Manufacturing Company, Brooklyn, N. Y., one of the oldest and largest industry, will have an interesting exhibit at the forthcoming show occupying space Nos. 230-233 inclusive.

Their exhibit will include the well known line of "Tag" Self-Operating Temperature Controllers for automatically regulating the steam inlet valves to size boxes, dye kettles, etc., also a device for automatically controlling both the time and temperature elements of various important textile processes; indicating thermometers, etc.

The "Tag" exhibit will be in charge of V. Wichum, chief engineer of the C. J. Tagliabue Manufacturing Company. Mr. Wichum has been associated with this company for many years and previous to his present incumbency, had charge of the Boston branch. He is well known among the numerous New England textile mills, having specialized to a large extent on this industry. He will be ably assisted by Mr. B. O. Pallin, another Tagliabue Temperature engineer of broad experience.

J. A. Davis, formerly overseer weaving Selma Manufacturing Company, Selma, Ala., has accepted a position with the Hopahka Cotton Mills, Moorhead, Miss., as overseer spooling, warping, slashing, weaving and cloth room.

Chemical Foundation, Inc., to Start Work Shortly After May First.

The Chemical Foundation, Inc., The one-dollar highball is one will open offices in the Market and thing that has not come to stay.

Fulton National Bank Building, New York, about May 1, according to an announcement made during the week. This foundation is to have charge of the licensing of the 4,500 German dye patents seized by the Alien Property Custodian. A full executive and administrative staff will be installed in the new offices.

Shortly after the date of opening, the work of licensing the patents to American firms will begin. The men in charge of the organization are working hard to perfect the plan under which licenses will be granted.

Cotton Goods

New York.—Business continues to grow in the cotton goods market. Large sales in primary markets have continued throughout the week and the mills are accumulating orders rapidly enough to warrant them in resuming operations in steadily increasing volume. Many sales have been made that will carry mills throughout August without accommodations and others have been made on contracts running to October.

The markets on print cloths, sheetings and convertibles are characterized as "boiling." Prices are advancing and large sales are being made. The demand is coming principally from printers, finishers, cutters and the manufacturing trades. Jobbers are buying very moderately and very carefully and several of the largest distributing organizations are manifesting only an indifferent interest in the rise in prices that is going on.

Print cloths, convertibles, sheetings, and fancies in fine cloths have been bought liberally by printers, bleachers and converters. The jobbers are buying conservatively although they are doing much more than they were a week or 10 days ago.

Ginghams are in good demand despite questionings about prices that may prevail when the next spring season is opened. The mills making staple ginghams and dress ginghams or those of them that are in operation are very comfortably provided with business for the next three or four months. Other colored goods lines are stronger but in several instances mills have not yet resumed normal operations, and deliveries are slow. The denim markets appear to be in a well sustained position and the trade is ready to absorb any Government surplus that may be offered without further unsettling of the current market. Many large users of denims have now come forward and have been trying to induce agents to accept business at lower prices than are now current. Tickings have been bought moderately, the orders coming from all parts of the country, and there is a feeling that prices

may advance soon.

Narrow prints have sold very freely of late and many jobbers have bought these goods more freely than at any time in four or five years. Percales have been sold liberally and prices are now on a firmer basis. Printed shirtings for the new season have had a large sale and are still in demand.

Converters of cotton goods say they are doing a good forward and spot business on novelties and high priced fabrics, but are not getting a volume business on staples as yet. They look forward to a much larger trade in the near future and have placed large mill orders this month. There has been a distinct revival in the demand for many silk and cotton goods, and some of the converters, who had courage enough to hold on to stocks, are now finding a ready market for their offerings.

The Yarn Market

Philadelphia.—There was a decidedly optimistic outlook in the yarn market this week by buyers, sellers and manufacturers. Inquiries during the last week were for a greater range of numbers than at any other time for more than four months. All the inquiries did not result in sales as sellers' ideas of values moved upward so rapidly that buyers were not able to keep pace with them. The upward movement of prices caused many manufacturers to place contracts for yarns in anticipation of their probable needs, and their buying helped to send prices still higher.

From all sections come reports that there are improvements in the demand for goods; the buying is larger, the orders come in oftener than they did a month ago and there is less dickering about prices. One report is that buyers are beginning to place orders for men's ribbed underwear, a garment that was hard to move a month ago, and that knitters will be buying yarns in a short time, but they want quality, as they will not accept the stuff they had to take during the war, when everything was in the spinners' favor.

The number in best demand was 30-2 warps and sales were made at prices ranging from 57 to 62 cents. Sales of 100 and 200 warps were made for 57 to 59 cents. There was a sale of 25,000 pounds at 61 cents, and a number of sales of 100 and 200 warps were made at 60 cents. Also, a sale of 100 warps for spot delivery was made for 62 cents. The demand for 30-2 skeins was light and sales of small quantities were reported made for 56 to 58 cents. A sale of 30-2 warps, 23 turns, was made for 62 cents.

WANT position as overseer of cloth room. Have had long experience as overseer and can give good references from prominent mill men. Address No. 2421.

WANT position as overseer of carding or spinning or both or superintendent of small mill. Can furnish excellent references as to my ability. Address No. 2423.

WANT position as overseer of weaving by man with 23 years experience in weave room and several years as overseer of prosperous mill. Thirty-seven years of age. Can furnish excellent references. Address No. 2427.

WANT position as overseer of carding or spinning or either one. Have held good positions and can give satisfactory references. Address No. 2429.

WANT position as bookkeeper by young man—married, thoroughly familiar with bookkeeping, pay rolls, shipping and general office duties in yarn and hosiery manufacturer, desires to change present position. Opportunity for advancement desired. Address No. 2430.

WANT position as overseer of beaming and dyeing. Would accept dye house or beaming for large plant. Have had 12 years experience as overseer of beaming and dyeing. Can get results on long or short chain beaming, raw stock or chain dyeing and bleaching. Address No. 2432.

WANT position as superintendent or overseer of large card room. Have had long experience in cotton mill and thoroughly capable. Address No. 2433.

WANT position as overseer of large cloth room or superintendent of small weave mill running plain goods. I am 39 years of age with family. Have some mill help. I have 15 years experience in cloth rooms, running different classes of goods. I am now employed as overseer of cloth room, but can change on short notice. Good references furnished, but my work proves my experience. Address No. 2434.

WANT position as superintendent of large cotton mill in South Carolina or South Piedmont section of North Carolina. Now employed, but would like to change location. Fully capable and will consider only large jobs. Address No. 2435.

Poor Tempering Does It { Makes broken travelers and cut threads.

QUALITY FIRST

SOUTHERN REPRESENTATIVES

WILSON COMPANY, Greenville, S. C.

MONOPOLE OIL

U. S. Patent No. 861,397 Serial No. 367,303

A valuable and well known product.

In Dyeing cotton it gives penetration and evenness of color, together with brilliancy.

In Finishing it imparts the much appreciated "glovey" feel.

JACQUES WOLF & CO.

Manufacturing Chemists and Importers

Passaic, N. J.

THE
"NO-WASTE"
ROVING CAN

Made of Seamless Hard Fibre

Prevents Your Waste and
Broken Ends

The "NO-WASTE" Seamless Roving cans have a reputation for quality and smoothness wherever roving cans are used. Practical experience has taught mill men in all sections of the country that ultimate economy can be achieved only with an equipment of "NO-WASTE" Seamless cans.
